Construction Materials

Type EZL Main Valve

Main Body: Cast iron or WCC Steel

Intermediate Flange: Steel

Actuator Casings: Anodized Forged Aluminum

Inlet and Outlet Plates: Steel

Diaphragm: Nitrile (NBR) with PVC coating

O-ring: Nitrile (NBR) or Fluorocarbon (FKM)

Seat: Nitrile (NBR) or Fluorocarbon (FKM)

Type 6352, 6353, 6354L, 6354M or 6354H Pilot

Body, Body Plug, Spring Case and Closing Cap:

Aluminum (standard) or Stainless steel

Control Spring: Zinc-plated steel

Bellows Assembly: Nickel and stainless steel

Body Plug and Closing Cap Gaskets: Composition

Other Metal Trim Parts: Steel, Aluminum and/or

Stainless steel

Diaphragm:

Type 6352: Nitrile (NBR)

Type 6353: Nitrile (NBR) or Fluorocarbon (FKM)

6354 Series: Neoprene (CR) or Fluorocarbon (FKM)

O-rings and Soft Parts: Nitrile (NBR) (standard) or

Fluorocarbon (FKM) (high temperature)

61 Series Pilots

Body and Spring Case: Cast iron

Upper and Lower Diaphragm

Type 61L: Nitrile (NBR) or Fluorocarbon (FKM)

Type 61HP: Neoprene (CR) or Fluorocarbon (FKM)

Metal Trim Parts: Steel, Stainless steel, Cast iron,

Aluminum, Brass or Zinc

Gasketing: Neoprene (CR)

Elastomer Seat and O-ring: Nitrile (NBR) or

Fluorocarbon (FKM)

Types 161M and 161EBM Pilots

Body: Stainless steel

Spring Case: Stainless steel

Body Plug and Diaphragm Limiter: Stainless steel

Control Spring and Adjusting screw: Plated steel

Valve Plug, Diaphragm and O-ring: Nitrile (NBR)

or Fluorocarbon (FKM)

Pilot and Actuator Vents

Type Y602 vent assembly

Type 252 Pilot Supply Filter

Body: Aluminum or Stainless steel

Filter Cartridge: Polyethylene

O-ring: Nitrile (NBR)

Drain Valve or Pipe Plug: Stainless steel

Type P590 Pilot Supply Filter

Body and Filter Head: Aluminum or Brass

Filter Element: Cellulose

1. The pressure/temperature limits in this Bulletin and any applicable standard or code limitation should not be exceeded.

- **Main Diaphragm**—The main diaphragm is Nitrile (NBR) reinforced with fabric coated with a PVC, which protects and extends the service life of the regulator in applications where liquids commonly found in natural gas pipe lines tend to shorten diaphragm life.
- **Common Body Platform**—The Type EZL uses the same standard Fisher® E-Body as the Types EZH and EZR pressure reducing regulators and Types EZ, ES, ED and ET pressure reducing control valves. This will allow easy conversion from one product to another without the need to remove the E-Body from the pipeline.
- **Bubble Tight Shutoff**—The Type EZL has a knife-edged, metal plug and a soft seat which provides bubble tight shutoff for use in applications where positive shutoff is required. For example: dead-end systems.
- **Absolutely No Atmospheric Bleed**—The Type EZL eliminates nuisance and wasteful bleed gas to atmosphere by utilizing a pilot-operated two-path control system, which bleeds 100% of the gas to the downstream system while the regulator is operating.
- **High Turn Down Capability**—The oversized diaphragm and unique piloting system of the Type EZL allows for a 100:1 turn down ratio, which will provide superior pressure control in systems with large variations in downstream flow demand.
- **In-Line Maintenance**—Top entry design reduces maintenance time. Trim parts can be inspected, cleaned and replaced without removing the body from pipeline.
- **Precise Pressure Control**—The Type EZL utilizes a wide range of pilots to provide stable and accurate downstream pressure control regardless of load changes or inlet pressure variations.
- **Full Usable Capacity**—Fisher regulators are laboratory tested. 100% of the published flow capacity can be used with confidence.
- **O-ring Design**—The Type EZL uses elastomer O-rings, reducing maintenance and assembly time.

Introduction

Type EZL regulators are accurate pilot-operated, pressure balanced and soft seated regulators. They are designed for use in natural gas distribution applications such as district regulating stations and commercial/industrial meter sets. They provide low differential, smooth, reliable operation, tight shutoff and long life.

The Type EZL pressure reducing regulator includes a pilot mounted on the Type EZL main valve for pressure reducing, wide-open monitoring or working monitoring applications. The Type EZL is also available with a slam-shut device for overpressure or overpressure and underpressure protection.

Principle of Operation

Single-Pilot Regulator (Figures 2 and 3)

The pilot-operated Type EZL uses inlet pressure as the operating medium, which is reduced through pilot operation to load the actuator diaphragm. Outlet or downstream pressure opposes loading pressure in the actuator and also opposes the pilot control spring.

When outlet pressure drops below the setting of the pilot control spring, pilot control spring force on the pilot diaphragm thus opens the pilot valve plug, providing additional loading pressure to the actuator diaphragm. This diaphragm loading pressure opens the main valve plug, supplying the required flow to the downstream system. Any excess loading pressure on the actuator diaphragm escapes downstream through the bleed restriction in the pilot.

When the gas demand in the downstream system has been satisfied, the outlet pressure increases. The increased pressure is transmitted through the downstream control line and acts on the pilot diaphragm. This pressure exceeds the pilot spring setting and moves the diaphragm, closing the orifice. The loading pressure acting on the main diaphragm bleeds to the downstream system through a bleed restriction in the pilot.

Figure 4. Wide-Open Monitoring System Operational Schematic

Monitoring Systems

Monitoring regulation is overpressure protection by containment, therefore, there is no relief valve to vent to the atmosphere. When the working regulator fails to control the pressure, a monitor regulator installed in series, which has been sensing the downstream and control pressure, goes into operation to maintain the downstream pressure at a slightly higher than normal pressure. During an overpressure situation, monitoring keeps the customer on line. Also, testing is relatively easy and safe. To perform a periodic test on a monitoring regulator, increase the outlet set pressure of the working regulator and watch the outlet pressure to determine if the monitoring regulator takes over at the appropriate outlet pressure.

Wide-Open Monitoring Systems (Figure 4)

There are two types of wide-open monitoring systems: upstream and downstream. The difference between upstream and downstream monitoring is that the functions of the regulators are reversed. Systems can be changed from upstream to downstream monitoring, and vice-versa, by simply reversing the setpoints of the two regulators. The decision to use either an upstream or downstream monitoring system is largely a matter of personal preference or company policy.

In normal operation of a wide-open configuration, the working regulator controls the system's outlet pressure. With a higher outlet pressure setting, the monitor regulator senses a pressure lower than its setpoint and tries to increase outlet pressure by going wide-open. If the working regulator fails, the monitoring regulator assumes control and holds the outlet pressure at its outlet pressure setting.

Working Monitoring Regulators (Figure 5)

In a working monitoring system, the upstream regulator requires two pilots and it is always the monitoring regulator. The additional pilot permits the monitoring regulator to act as a series regulator to control an intermediate pressure during normal operation. In this way, both units are always operating and can be easily checked for proper operation.

In normal operation, the working regulator controls the outlet pressure of the system. The monitoring regulator's working pilot controls the intermediate pressure and the monitoring pilot senses the system's outlet pressure. If the working regulator fails, the monitoring pilot will sense the increase in outlet pressure and take control.

Figure 5. Working Monitoring System Operational Schematic

Working monitor installations require a Type EZL main valve with a working pilot and a monitoring pilot for the upstream regulator and a Type EZL with the appropriate pilot for the downstream regulator.

Pilot Descriptions

The Type EZL pressure reducing regulator includes either a 6350 or 61 Series pilot mounted on the Type EZL main valve for pressure-reducing application or wide-open monitoring applications and 161 Series monitor pilots for working monitoring systems.

Type 6352—Outlet pressure range of 2 to 10 psig / 0.14 to 0.69 bar. The Type 6352 can be used as the pilot on single stage pressure reducing regulators or as the monitor pilot or as the working pilot in wide-open monitor systems.

Type 6353—Outlet pressure range of 3 to 125 psig / 0.21 to 8.6 bar. The Type 6353 can be used as the pilot on single stage pressure reducing regulators or as the monitor pilot or as the working pilot in wide-open monitor systems.

Type 6354L—Outlet pressure range of 85 to 200 psig / 5.9 to 13.8 bar. The Type 6354L can be used as the

pilot on single stage pressure reducing regulators or as the monitor pilot or as the working pilot in wide-open monitor systems.

Type 6354M—Outlet pressure range of 175 to 220 psig / 12.1 to 15.2 bar. The Type 6354M can be used as the pilot on single stage pressure reducing regulators or as the monitor pilot or as the working pilot in wide-open monitor systems.

Type 6354H—Outlet pressure range of 200 to 290 psig / 13.8 to 20.0 bar. The Type 6354H can be used as the pilot on single stage pressure reducing regulators or as the monitor pilot or as the working pilot in wide-open monitor systems.

Type 61L—Low pressure pilot for outlet pressure range of 0.25 to 20 psig / 0.02 to 1.38 bar. The Type 61L can be used as the pilot on single stage pressure reducing regulators or as the monitor pilot or as the working pilot in wide-open monitor systems.

Type 61HP—Extra high pressure pilot for outlet pressure range of 15 to 290 psig / 1.03 to 20.0 bar. The Type 61HP can be used as the pilot on single stage pressure reducing regulators or as the monitor pilot or as the working pilot in wide-open monitor systems.

1. Minimum suggested difference between slam-shut set pressure and normal operating pressure of the system.
2. Maximum difference between overpressure and underpressure when using one manometric device (Type BMS1) with tripping hook. For underpressure and overpressure points greater than this maximum number, use a second manometric device (Type BMS2) for underpressure protection.

Type 161M—Outlet pressure range from 5 to 290 psig / 0.34 to 20.0 bar. A static sensing (control) line is isolated from pilot bleed (exhaust). The Type 161M is used in working monitor and other application that require a sensing line isolated from pilot bleed (exhaust).

Type 161EBM—Outlet pressure range from 5 to 290 psig / 0.34 to 20.0 bar. The pilot bleed (exhaust) is isolated from the sense (control) line. Type 161EBM pilot is used in monitoring systems requiring an isolated pilot bleed (exhaust). For applications that have high pressure drops, using a Type 161EBM monitor pilot will increase the accuracy of the regulator.

Slam-Shut Device Principle of Operation

The optional slam-shut device can provide either overpressure (OPSO) or overpressure (OPSO) and

underpressure (UPSO) protection by completely shutting off the flow of gas to the downstream system. The slam-shut has a mechanism box and a manometric device.

The manometric device is a spring and diaphragm actuator. Its movement activates the detection stage of the mechanism box. The shutoff is a two stage process, the detection stage and the power stage. This separation between detection stage and power stage provides maximum precision, alleviating many false trips caused by environmental vibrations. The slam-shut device includes a bypass valve that will allow pressure to be equalized when resetting the device. Once the slam-shut device has been tripped, it must be manually reset. For more information about the Type EZL with a slam-shut device, contact the local Sales Office.

Installation

The Type EZL may be installed in any position, but is normally installed in a horizontal pipeline with the pilot or pilots above the body. See Figure 10 for typical piping installation.

Capacity Information

Note

Type EZL flow capacities are laboratory verified; therefore, they may be sized for 100% flow using capacities as shown in Table 11. It is not necessary to reduce published capacities.

Tables 11 and 12 show the natural gas regulating capacities of the Type EZL regulator at selected inlet pressures and outlet pressure settings. Flows are in thousands of SCFH at 60°F and 14.7 psia (and in thousands of Nm³/h at 0°C and 1.01325 bar) of 0.6 specific gravity natural gas. To determine equivalent capacities for air, propane, butane or nitrogen, multiply the capacity by the following appropriate conversion factor: 0.775 for air, 0.628 for propane, 0.548 for butane or 0.789 for nitrogen. For gases of other specific gravities, multiply the given capacity by 0.775 and divide by the square root of the appropriate specific gravity. Then, if capacity is desired in normal cubic meters per hour at 0°C and 1.01325 bar, multiply SCFH by 0.0268.

To find approximate regulating capacities at pressure settings not given in Tables 11 and 12 or to find

wide-open flow capacities for relief sizing at any inlet pressure, perform one of the following procedures. Then, if necessary, convert using the factors provided above.

Critical Pressure Drops

For critical pressure drops (absolute outlet pressure equal to or less than one-half of absolute inlet pressure), use the following formula:

$$Q = (P_1)(C_g)(1.29)$$

Non-Critical Pressure Drops

For pressure drops lower than critical (absolute outlet pressure greater than one-half of absolute inlet pressure).

$$Q = \sqrt{\frac{520}{GT}} C_g P_1 \sin \left(\frac{3417}{C_1} \sqrt{\frac{\Delta P}{P_1}} \right) \text{ DEG}$$

where,

Q = gas flow rate, SCFH

P₁ = absolute inlet pressure, psia (P₁ gauge + 14.7)

C_g = regulating or wide-open gas sizing coefficient

G = gas specific gravity of the gas

T = absolute temperature of gas at inlet, °Rankine

C₁ = flow coefficient

ΔP = pressure drop across the regulator, psi

Ordering Guide

Body Size (Select One)

- ☐ 2 in. / DN 50 Body***
☐ 3 in. / DN 80 Body***
☐ 4 in. / DN 100 Body***

Body Material and End Connection Style (Select One)

WCC Steel

- ☐ NPT (2 in. only)***
☐ CL150 RF***
☐ CL300 RF***
☐ CL600 RF***
☐ BWE _____ (Indicate Schedule 40 or 80)**
☐ SWE**

Cast Iron

- ☐ NPT (2 in. only)***
☐ CL125 FF***
☐ CL250 RF***

Main Valve Seat Material (Select One)

- ☐ Nitrile (NBR) (standard)***
☐ Fluorocarbon (FKM)***

Outlet Pressure Range (Select One)

Type 61L

- ☐ 0.25 to 2 psig / 0.017 to 0.14 bar, Red***
☐ 1 to 5 psig / 0.069 to 0.35 bar, Yellow***
☐ 2 to 10 psig / 0.14 to 0.69 bar, Blue***
☐ 5 to 15 psig / 0.35 to 1.03 bar, Brown***
☐ 10 to 20 psig / 0.69 to 1.38 bar, Green***

Type 61HP

- ☐ 15 to 45 psig / 1.03 to 3.10 bar, Yellow***
☐ 35 to 100 psig / 2.41 to 6.90 bar, Blue***
☐ 100 to 300 psig / 6.90 to 20.7 bar, Red⁽¹⁾***

Type 6352

- ☐ 2 to 10 psig / 0.14 to 0.69 bar, Black***

Type 6353

- ☐ 3 to 40 psig / 0.21 to 2.8 bar***
☐ 35 to 125 psig / 2.41 to 8.6 bar, Red***

Type 6354L, 6354M or 6354H

- ☐ 85 to 200 psig / 5.9 to 13.8 bar, Blue***
☐ 175 to 220 psig / 12.1 to 15.2 bar, Blue***
☐ 200 to 300 psig / 13.8 to 20.7 bar, Green⁽¹⁾***

1. Operating range is limited to maximum pressure.

Regulators Quick Order Guide	
***	Readily Available for Shipment
**	Allow Additional Time for Shipment
*	Special Order, Constructed from Non-Stocked Parts. Consult your local Sales Office for Availability.
Availability of the product being ordered is determined by the component with the longest shipping time for the requested construction.	

Type 161M

- ☐ 5 to 15 psig / 0.35 to 1.03 bar, Yellow***
☐ 10 to 125 psig / 0.69 to 8.6 bar, Red***
☐ 120 to 300 psig / 8.3 to 20.7 bar, Green⁽¹⁾***

Type 161EBM

- ☐ 5 to 15 psig / 0.35 to 1.03 bar, White***
☐ 10 to 40 psig / 0.69 to 2.8 bar, Yellow***
☐ 30 to 75 psig / 2.07 to 5.17 bar, Black***
☐ 70 to 140 psig / 4.83 to 9.65 bar, Green***
☐ 130 to 200 psig / 8.96 to 13.8 bar, Blue***
☐ 200 to 350 psig / 13.8 to 24.1 bar, Red⁽¹⁾***

Pilot Elastomer Material (Select One)

- ☐ Nitrile (NBR)/Polyurethane (PU) (standard)***
☐ Fluorocarbon (FKM)***

Travel Indicator (Optional)

- ☐ Yes***
☐ No***

Main Valve Replacement Parts Kit (Optional)

- ☐ Yes, send one replacement parts kit to match this order.

Pilot Replacement Parts Kit (Optional)

- ☐ Yes, send one replacement parts kit to match this order.

Specification Worksheet

Application:

Specific Use _____

Line Size _____

Fluid Type _____

Specific Gravity _____

Temperature (Ambient Range + Fluid Temp Range) _____

Does the Application Require Overpressure Protection?

- ☐ Yes ☐ No

Pressure:

Maximum Inlet Pressure _____

Minimum Inlet Pressure _____

Differential Pressure _____

Set Pressure _____

Maximum Flow _____

Accuracy Requirements:

Less Than or Equal To:

- ☐ 5% ☐ 10% ☐ 20% ☐ 40%
